Summary

Computer Science student (CGPA 3.46) seeking a web development internship to improve my MERN stack skills. Built full-stack applications with React, Node.js, Express, and MongoDB, including features like authentication and REST APIs. Looking to contribute to real-world projects while learning from an experienced development team.

Skills

Frontend: HTML, CSS, JavaScript, React | **Backend:** Node, Express

Databases: MySQL, MongoDB | **Tools:** Git, REST APIs, VS code

Projects

- **FairGig** | React, Node.js, Express, Fast API, MongoDB

A gig worker platform for earnings logging, screenshot verification, and anomaly detection – built for SOFTEC 2026 hackathon. Workers log earnings across platforms, upload proof, and receive verified income reports. System flags unusual commission hikes or income drops. Advocates use analytics to spot unfair patterns.

Microservices: Auth, Earnings, Anomaly (Fast API/Python), Grievance (Node.js), Analytics, Certificate Renderer

- **SPYLT** – Animated Can Website | React, Framer Motion, Vercel

Animated can website featuring scroll-triggered animations and interactive product display for a protein milk brand. Showcases multiple flavors with smooth transitions and responsive design.
